

# NonZero PrefSuf Sums

Input file: standard input  
Output file: standard output  
Time limit: 2 seconds  
Memory limit: 512 megabytes

Prince Charming wanted to give you a long, tedious legend full of pomp and flair. But Shrek won't allow this! He gives you a completely formal and short statement instead.

Count the number of arrays  $[a_1, a_2, \dots, a_n]$  of integers that satisfy the following conditions:

1.  $|a_i| \leq m$  for all  $1 \leq i \leq n$ .
2. There exists a permutation  $[b_1, b_2, \dots, b_n]$  of elements of  $a$ , such that the following holds:
  - $b_1 + b_2 + \dots + b_k \neq 0$  for all  $1 \leq k \leq n$ .
  - $b_k + b_{k+1} + \dots + b_n \neq 0$  for all  $1 \leq k \leq n$ .

Output the answer modulo  $p$ , where  $p$  is a big prime number.

## Input

The only line of the input contains three integers  $n, m, p$ .

## Constraints

$2 \leq n \leq 100$ ,  
 $1 \leq m \leq 100$ ,  
 $10^8 < p < 10^9$ ,  $p$  is prime.

## Output

Output a single integer — the answer modulo  $p$ .

## Examples

standard input	standard output
2 1 998244353	2
69 42 696969697	378553557

## Note

In the **first** test case, there are 9 possible arrays:  $[-1, -1]$ ,  $[-1, 0]$ ,  $[-1, 1]$ ,  $[0, -1]$ ,  $[0, 0]$ ,  $[0, 1]$ ,  $[1, -1]$ ,  $[1, 0]$ ,  $[1, 1]$ . Only arrays  $[-1, -1]$  and  $[1, 1]$  satisfy the condition from the problem.
